### CONNECTIONS

\* Circled numbers indicate the procedures described in the Installation Procedure.

#### CAUTION

When two speakers are connected to the system, be sure to connect both of them to the front output or rear output. In other words, do not connect the positive connector of the left speaker to the front output and the negative connector to the rear output.

#### WARNING

To prevent fire when the power supply cable (Red) or memory backup cable (Yellow) is short-circuited by coming into contact with the vehicle chassis (ground), only connect the power supply after making the fuse box connections.

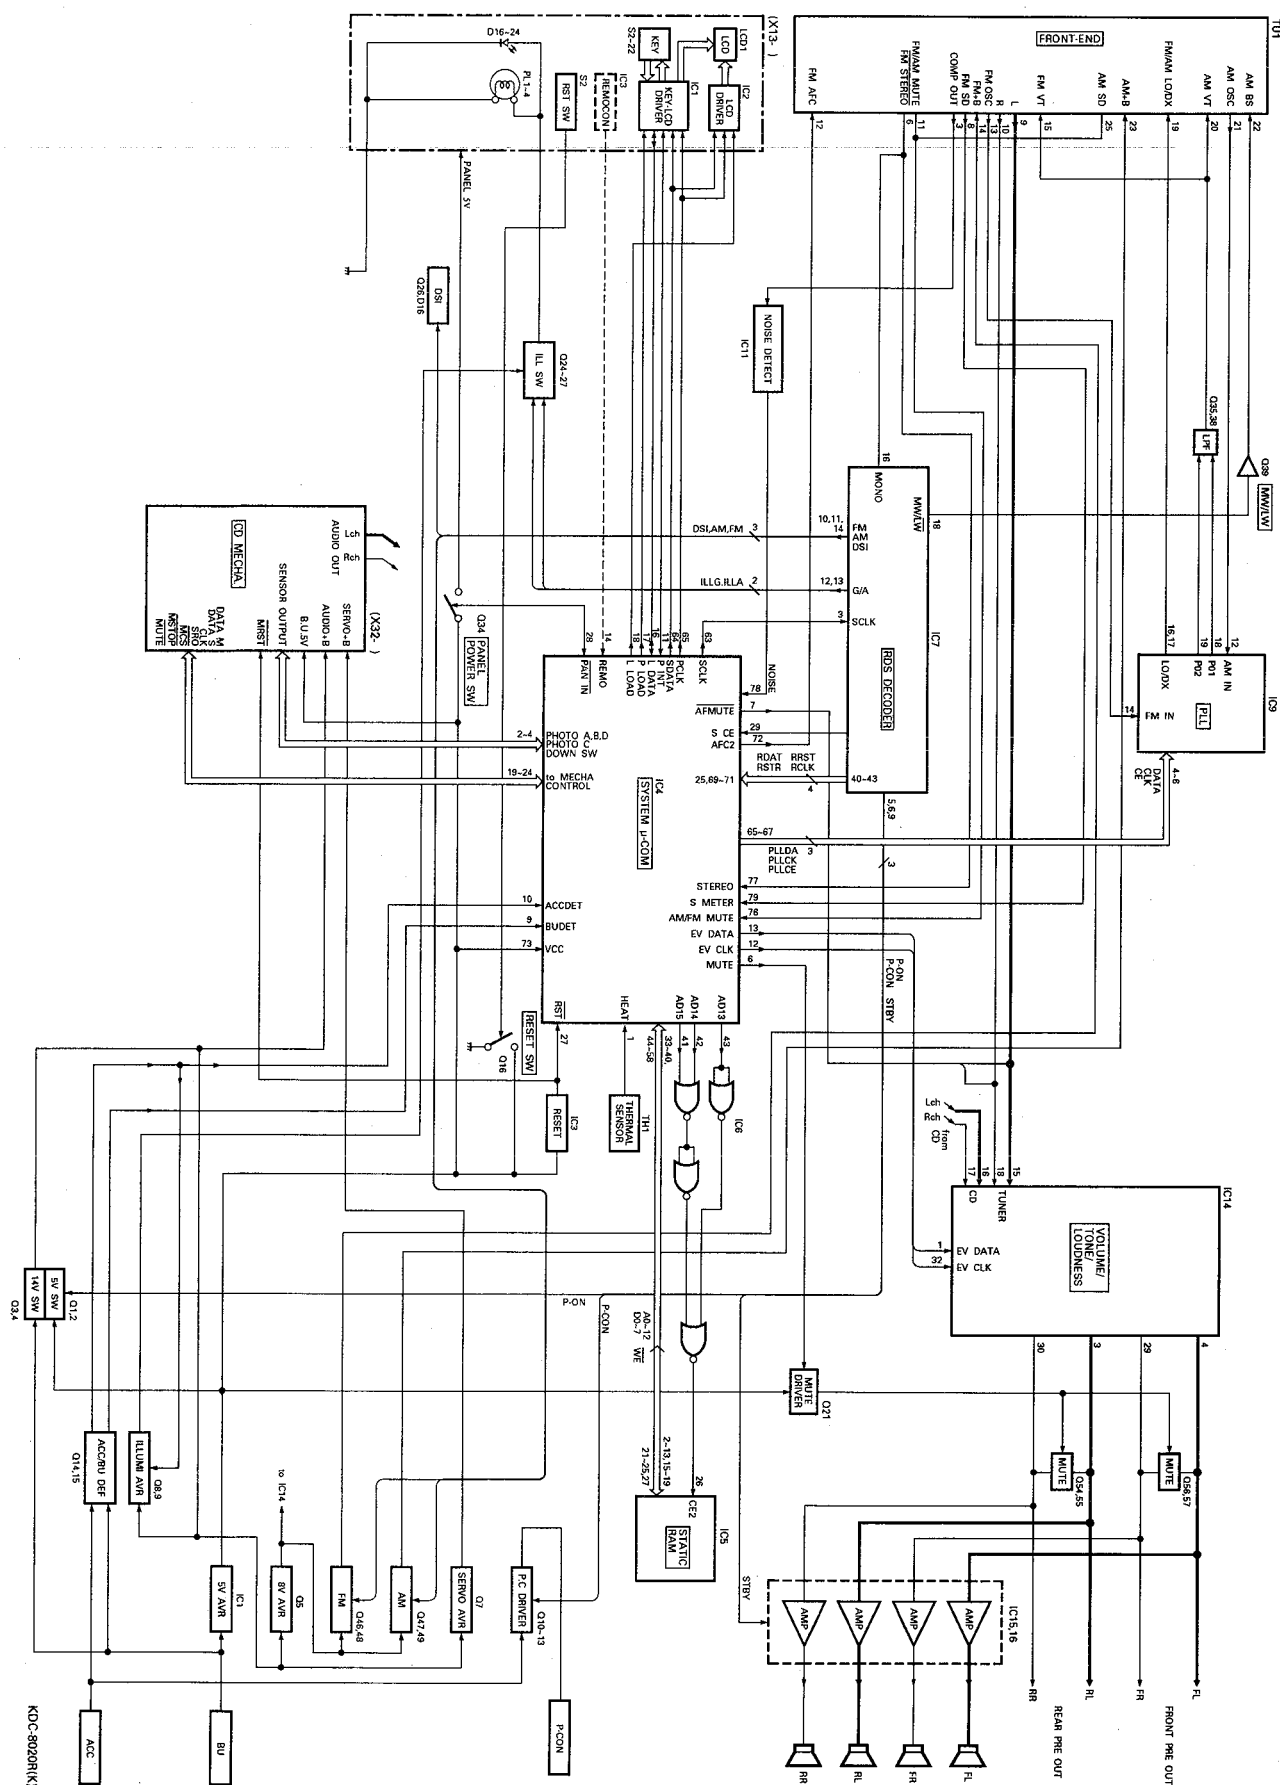

## TROUBLESHOOTING GUIDE

Often, what appears to be a malfunction is due to user error. Before calling for service please consult the following table.

Symptom	Cause	Remedy
The power is not turned on.	The wiring harness fuse blows.	Check cables for shorts, then replace the fuse with one of with the same rating (shown on the case).
No sound or sound is low.	The volume level is minimum.	Raise the volume level.
	The fader or balance is set to one side.	Adjust the fader and balance.
	The input/output cable or wiring harness is connected incorrectly.	Connect the input/output cable or wiring harness correctly. See "Connections" (Page 42).
The unit does not work properly when a button is pressed.	The microcomputer malfunctions.	Press the Reset button on the front panel.
Sound quality is poor. (Sound distortion)	The volume level is too high.	Use the appropriate volume level.
	A speaker cable is pressed by a screw in the car.	Check the speaker cabling.
	A speaker cable is shared.	Connect the speaker output connectors to the separate speaker connectors.
Poor radio reception.	The car antenna is not extended.	Extend the antenna.
	The antenna control cable is not connected.	Connect the cable correctly. See "Connections (Page 42)".
When the ignition key switch is set to OFF, the memory contents disappear.	The Memory backup cable is not connected correctly.	Connect the cable correctly. See "Connections (Page 42)".
A Disc cannot be inserted.	Another disc has already been inserted.	Eject the previous disc before inserting another.
A disc is ejected immediately after being inserted.	The disc is upside down.	Insert the disc with the title side up.
	The disc is very dirty.	Check and, if possible, clean the disc See "Cleaning your discs" (Page 5).
As disc plays, you hear skipping.	The disc is dirty or damaged.	Check and, if possible, clean the disc See "Cleaning your discs" (Page 5).
Sound quality is poor.	The recording of the disc is poor.	Try playing another disc. If the sound is good, the fault was with the original disc.
	The disc is dirty or damaged.	Check and, if possible, clean the disc See "Cleaning your discs" (Page 5).
The specified disc is not played.	The player is set to RANDOM PLAY.	Turn off RANDOM PLAY.

## BLOCK DIAGRAM

## CIRCUIT DESCRIPTION

## SWITCH UNIT (X13-8662-70)

Ref. No.	Device	Use and Function	Operation and Condition
IC1	MSM6606GS-VK	LCD drive with key scan function	Drive the LCD and key scan
IC2	MSM6544GS	LCD drive	Drive the LCD
IC3	RS-21	Remote control light sensor	Receive remote control light
Q1	XDC124EK or DTC124EK	Remote control light sensor	Switches the remote control light sensor
Q2	DTA114EK	Power SW	Power ON/OFF

## ELECTRIC UNIT (X25-7232-70)

Ref. No.	Device	Use and Function	Operation and Condition
IC1	M5278D05	5 V AVR	5 V Power supply.
IC2	M5237ML	AVR driver	8 V AVR.
IC3	S-80740AN-D4	Reset IC	
IC4	M38067MCD 155FP	System $\mu$ -COM	
IC5	LC3564QM-10	S-RAM	Memory of RDS data such as AF list.
IC6	TC74HC02AF	HC-MOS (NOR)	Control for S-RAM (IC5).
IC7	KK202F	RDS decoder	RDS decoder.
IC8	SAA6579T	RDS demodulator	
IC9	LM7001M	PLL IC	PLL for FM/AM tuner (TU1).
IC10	TC4W66F	C-MOS analog switch	Switches LPF time constant during FM seek.
IC11	NJM4565MD	Noise detect	
IC12	NJM4565MD	RDS circuit	Composite signal buffer
IC14	TEA6320T	Electronic volume	
IC15, 16	AN7190K	Power amplifier	
Q1	DTC124EK or XDC124EK	5 V SW	Turns Q2 ON/OFF
Q2	2SB1277	5 V SW	Interlocked with $\mu$ -COM power ON.
Q3	DTC124EK or XDC124EK	14.4 V SW	Turns Q4 ON/OFF
Q4	2SA1428	14.4 V SW	Interlocked with $\mu$ -COM power ON.
Q5	2SB1565F (E, F)	AVR	8 V output
Q7	2SD2396F40	Servo +B AVR	Servo power supply, 7.6 V output.
Q8	2SB1565F (E, F)	Illumination AVR	Illumination power supply, 10.5 V output.
Q9	2SC2412K	Illumination AVR	Illumination power supply, 10.5 V output.
Q10	2SB1277	P-CON	P-CON driver
Q11	2SA1037K	P-CON	P-CON protection
Q12	DTA124EK or XDA124EK	P-CON	P-CON protection
Q13	DTC124EK or XDC124EK	P-CON ON/OFF	
Q14	DTC124EK or XDC124EK	BU detector	Collector goes "L" when BU voltage is connected.
Q15	2SC2412K	Acc detector	Collector goes "L" when Acc is ON.

## CIRCUIT DESCRIPTION

IC1: AN8806SB (X32-4010-00)

3-BEAM HEAD AMPLIFIER IC

(Note: The values mentioned below are the design values when supply voltage  $V_{CC} = 5\text{ V}$ .)

### 1. Tracking circuitry

#### (1) IV amp adjustment

The conversion resistance value of the IV amps can be obtained with the following calculation.

$$Z_{IV} = 150K + 20K + \frac{150K \times 20K}{10K + R_{PDF(E)}} \quad \text{..... ①}$$

When  $R_{PDF(E)} = 0$ , that is, when pins ③① and ③② are equal to  $V_{REF}$ , the maximum value of  $Z_{IV}$  will be as follows:

$$Z_{IV} = 150K + 20K + \frac{150K \times 20K}{10K} = 470K \text{ ohms}$$

Assuming that tracking PD elements F and E output  $I_F$  and  $I_E$  respectively, these currents have the patterns as shown in the left and their maximum input values are approx.  $2.2\text{ }\mu\text{A}$ . If the maximum input current exceeds this value, resistances should be attached to pins ③① and ③②. The value of these resistances can be obtained as follows:

$$R_{PDE} = \frac{150K \times 20K}{\frac{1.0}{I_{MAX}} - (150K + 20K)} - 10K\Omega$$

# KDC-8020R

## CIRCUIT DESCRIPTION

### IC1: AN8806SB (X32-4010-00)

Each IV converter amp incorporates a filter. When pins ③① and ③② are connected directly to  $V_{REF}$ , the cut-off frequency  $f_c$  of the filter will be as follows:

$$f_c = \frac{1}{2\pi \cdot 470K \cdot 7.36pF} \approx \text{approx. 46 kHz}$$

#### (2) Tracking balance

As shown in the block diagram on the previous page (tracking circuitry), a resistor and capacitor are connected to pin ③⑩ and the balance is adjusted from the resistor. The signal ratio of VCBA can be varied from approx. 0.14 up to 7 with a variable input of  $\pm 1$  [V] with respect to the reference voltage  $V_{REF}$ . The polarity is set so that TEOUT rises when the variable input changes from +1 [V] to -1 [V]. When the variable input is equal to  $V_{REF}$ , the VCBA signal ratio is equal to 1.

#### (3) Tracking error amp

The tracking error outputs F and E are output at pin ②⑤. (To set the amplitude, connect a resistor across pins ②⑤ and ②⑤ so that TEOUT from pin ②⑤ is 1.67 Vp-p.)

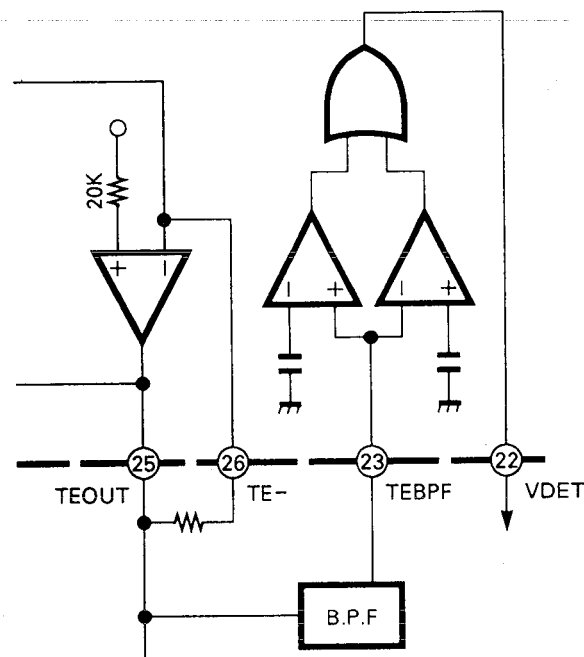

This output has an absorption current of approx. 300  $\mu A$ , so care is required at the time of external connection.

#### (4) Cross-comparator

Based on the TEOUT signal at pin ②⑤, the cross-comparator output signal is output at pin ②④.

(Note) This comparator does not include hysteresis.

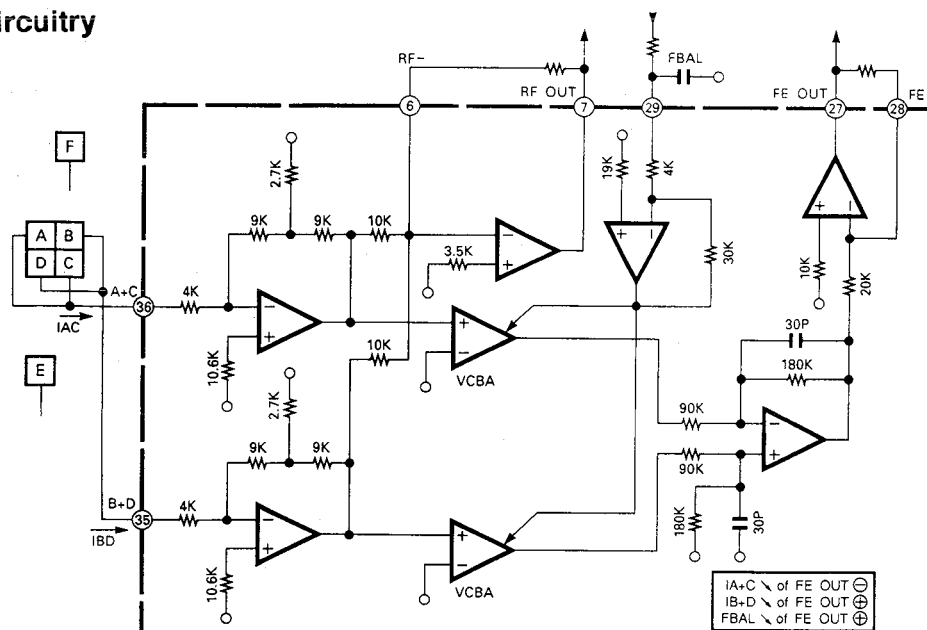

### 2. Vibration detector

This circuit is composed of a wind comparator of approx.  $\pm 75$  mV. It detects abnormal vibration component of tracking error and outputs "High" at VDET of pin ②②.

The input signal is obtained from TEOUT at pin ②⑤ which passes through the band-pass filter (B.P.F.) and input to pin ②③.

### 3. Focusing circuitry

## CIRCUIT DESCRIPTION

IC1: AN8806SB (X32-4010-00)

### (1) Focusing error

The PD output currents have the patterns as shown on the above. Similarly to the case of tracking error, the knowledge on their maximum values including the output current dispersion is required.

After passing through the balance amp (VCBA), the signals are input to the differential amp with a cutoff frequency of 30 kHz, sent through the gain setting amp and output at FEOU of pin ②⑦. To set the amplitude, connect a resistor across pins ②⑧ and ②⑦ so that FEOU from pin ②⑦ is 1.67 Vp-p.

### (2) Focusing balance

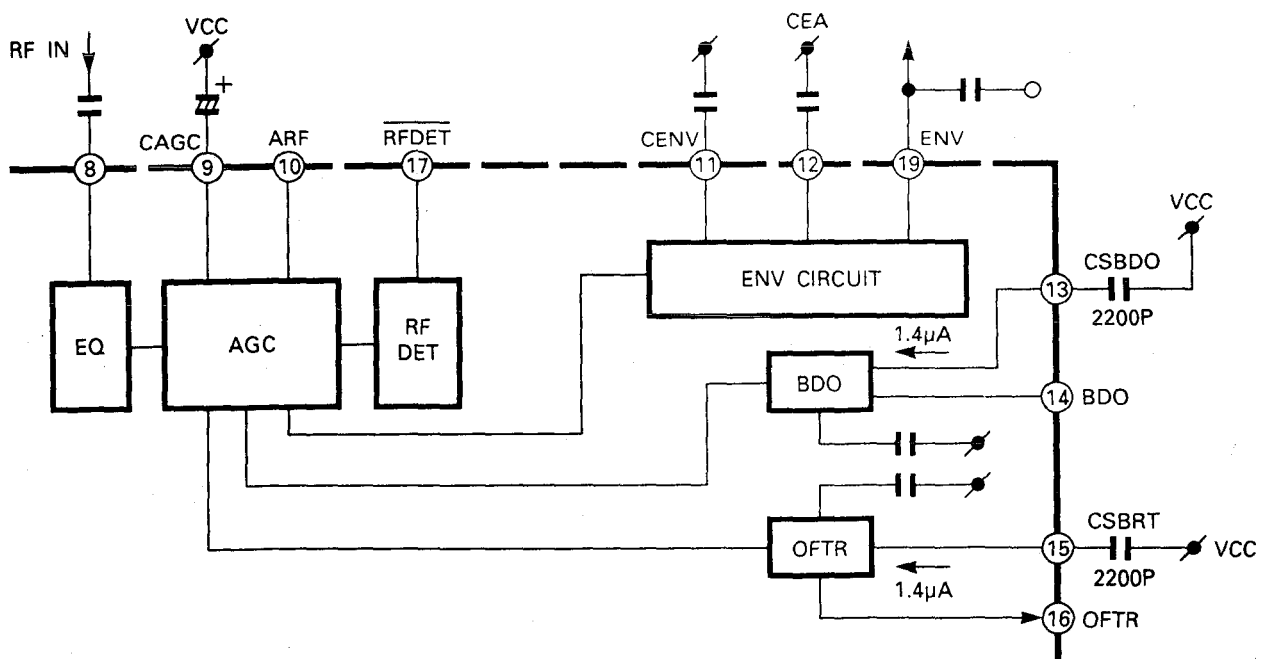

As shown in the block diagram on the previous page (focusing circuitry), a resistor and capacitor are connected to pin ②⑨ and the balance is adjusted from the

resistor. The signal ratio of VCBA can be varied from approx. 0.14 up to 7 with a variable input of  $\pm 1$  [V] with respect to the reference voltage  $V_{REF}$ . The polarity is set so that FEOU rises when the variable input changes from +1 [V] to -1 [V]. When the variable input is equal to  $V_{REF}$ , the VCBA signal ratio is equal to 1.

### (3) RF amp

The signals input from the PD elements passes through the IV converter amps, composed into an RF signal by the RF amp and output at RFOU of pin ⑦. (To set the gain of this amp, connect a resistor across pins ⑥ and ⑦ so that RFOU from pin ⑦ is approx. 0.5 Vp-p.)

## 4. RF AGC - detector circuitry

# KDC-8020R

## CIRCUIT DESCRIPTION

IC1: AN8806SB (X32-4010-00)

### (1) RF AGC

The RF signal from pin ⑦ is input to pin ⑧ via a capacitor. After the gain has been controlled, it is output at pin 10. The input signal level is from approx. 250 mVp-p or 500 mVp-p (TYP.) to 1.0 Vp-p, and the output level is approx. 1.0 Vp-p (when input signal  $f = 500$  kHz). Pin ⑨ is designed to connect the capacitor for the AGC loop filter, and it is recommended to connect a capacitor of around 1  $\mu$ F between the pin and Vcc. The internal impedance of this terminal is approx. 100 k $\Omega$ . The input impedance of the EQ connected to pin ⑧ is approx. 27.9 k $\Omega$  and the EQ characteristic is as shown in the next figure (which shows an approximate characteristic based on calculations).

The EQ characteristic shown is the characteristic when the gain is almost maximum.

### (2) RF detection (NRFDET)

This circuit detects the amplitude of the RF signal input through pin ⑧. The input RF signal passes through the high-pass filter with an  $f_c = 50$  kHz before being detected. The detection level is approx. 100 mV when the input frequency is 500 kHz, and there is a hysteresis of approx. 50 mV.

## CIRCUIT DESCRIPTION

### IC1: AN8806SB (X32-4010-00)

#### (3) BDO detection

The BDO is detected by means of high-speed detection (built in) and low-speed detection of the RF signal during BDO. The low-speed detection requires a capacitor between pin ⑬ and Vcc. The use of a larger-capacity capacitor detects large RF dropout and the

use of a shorter-capacity capacitor detects small RF dropouts. The detection current is approx. 1.4  $\mu$ A (TYP.), and the recommended capacity is 2200 pF. With this condition, the BDO is detected when the RF amplitude drops by approx. 25%.

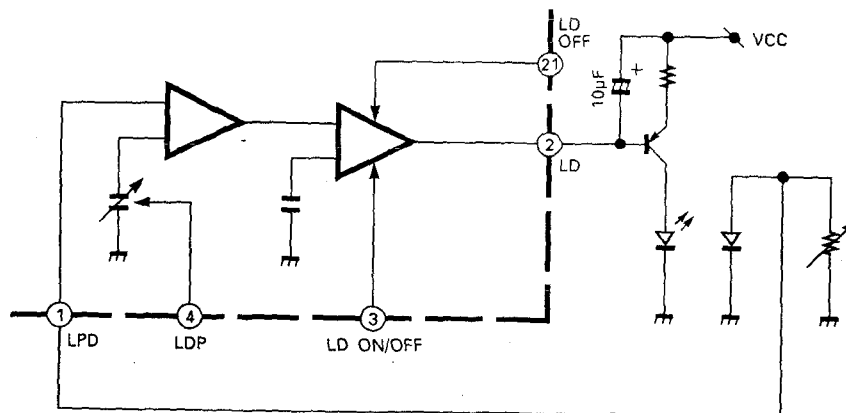

#### (4) OFTR detection

Similarly to BDO detection, The OFTR is also detected with high-speed detection (built in) and low-speed detection. The low-speed detection requires a capacitor between pin ⑮ and Vcc. The detection current is approx. 1.4  $\mu$ A (TYP.). The relationship with the

capacity is similar to the VDO detection. The recommended capacity is also 2200 pF. With this condition, the OFTR is detected when the RF amplitude drops by approx. 65%.

### 5. APC

The LD reference voltage can be switched by setting pin ④ open or connecting it to GND. The reference voltage is approx. 170 mV when pin ④ is open, and approx. 140 mV when pin ④ is connected to GND.

Pins ③ and ② are control terminals for turning the LD on and off. The LED goes on when "High" is input to pin ③ and goes off when "High" is input to pin ②.

# KDC-8020R

## CIRCUIT DESCRIPTION

IC1: AN8806SB (X32-4010-00)

### 6. Reference power

The reference power supply for servo operations is built in.

( Pin ⑳  $V_{cc} \times (1/2)$  [V]    Current capacity  
Sink & source approx. 3 mA )

This power supply requires a capacitor for prevention of oscillation. To pin ⑳, it is recommended to connect a capacitor of 1 to 10  $\mu\text{F}$ .

### 7. Envelope detector

This block extracts the fluctuation of the 3T component of RF signal that is required for focusing balance adjustment.

Pins ⑪ and ⑫ are used to connect capacitors which form a part of the filter for extracting the signal fluctuation. It is recommended to connect a capacitor of approx. 100 pF to pin ⑪ and a capacitor of approx. 0.027  $\mu\text{F}$  to pin ⑫. The input impedance of pin ⑫ is approx. 8.5 k $\Omega$ .

Pin ⑲ is the envelope output terminal. This terminal requires external connection of a capacitor which forms the part of the filter, and it is recommended to connect a capacitor of approx. 0.027  $\mu\text{F}$  between  $V_{REF}$ . The output impedance of pin ⑲ is approx. 8.5 k $\Omega$ .

## CIRCUIT DESCRIPTION

### IC2: MN662720RB (X32-4010-00) CD SIGNAL PROCESSOR LSI

#### 1.Type

CD (Compact Disc) signal processor LSI.

#### 2.Summary

The MN662720RB is a CD signal processor LSI incorporating the optical servo (focusing, tracking and traverse servo) processing functions, digital signal processing functions (EFM demodulation, error correction) and spindle motor digital servo processing function for a CD player in a single chip.

#### 3. Features and functions

(Optical servoes)

- Focusing, tracking and traverse servo.
- Automatic adjustment functions (FO/TR gain, FO/TR offset, FO/TR balance)
- Built-in DC converter for drive voltage output.
- Built-in drop-out countermeasure.
- Anti-shock function compatibility.
- Built-in track cross counter.
- Linear motor and screw-feed traverse compatibility.
- 3-beam and 1-beam compatibility.

(Digital signal processing)

- Built-in DSL and PLL.
- Frame sync detection/protection/interpolation.
- Subcode data processing
  - Q data CRC check,
  - Q data register built in.
- CIRC error correction
  - C1 decoder: Double error correction
  - C2 decoder: Triple error correction
  - Built-in deinterleaving 16K RAM
- Audio data interpolation
  - Average interpolation, previous value hold, soft muting,
  - digital attenuation (256 levels).
- Soft attenuation (256 levels).
- Audio data peak level detection function.
- Auto cue detection.
- Digital audio interface (EIAJ format).
- Audio data serial interface.

(Spindle motor servo)

- CLV digital servo.

(Other)

- Built-in playback pitch control function ( $\pm 13\%$ )
- Double-speed playback.

#### 4. Appearance

80-pin, flat package (QFS080-P-1414).

# KDC-8020R

### 7. Terminal description

Pin No.	Symbol	I/O	Function
1	BCLK	O	Bit clock output for SR data.
2	LRCK	O	L/R identification signal output.
3	SRDATA	O	Serial data output.
4	DVDD1	I	Digital circuit power supply.
5	DVSS1	I	Digital circuit GND.
6	TX	O	Digital audio interface output signal.
7	MCLK	I	Microcomputer command clock signal input. (Data is latched at the positive-going edges.)
8	MDATA	I	Microcomputer command data input.
9	MLD	I	Microcomputer command load signal input. (L: Load)
10	SENSE	O	Sense signal output (OFT, FESL, NACEND, NAJEND, POSAD, SFG).
11	/FLOCK	O	Focusing servo lock signal. (L: Locked)
12	/TLOCK	O	Tracking servo lock signal. (L: Locked)
13	BLKCK	O	Subcode block clock signal. (fBLKCK=75Hz)
14	SQCK	I	External clock input for subcode Q register.
15	SUBQ	O	Subcode Q code output.
16	DMUTE	I	Muting input. (H: Muting)
17	STAT	O	Status signal output (CRC, CUE, CLVS, TTSTOP, FCLV, SQOK).
18	/RST	I	Reset input. (L: Reset)
19	SMCK	O	When MSEL=H, 8.4672 MHz clock signal output. When MSEL=L, 4.2336 MHz clock signal output.
20	PMCK	O	88.2 kHz clock signal output.
21	TRV	O	Traverse forced feed output.
22	TVD	O	Traverse drive output.
23	PC	O	Spindle motor ON signal. (L:ON)
24	ECM	O	Spindle motor drive signal (forced mode output), 3-state.
25	ECS	O	Spindle motor drive signal (servo error signal output).
26	KICK	O	Kick pulse output.
27	TRD	O	Tracking drive output.
28	FOD	O	Focusing drive output.
29	VREF	I	Reference voltage for DA output block (TVD, ECS, TRD, FOD, FBAL, TBAL).
30	FBAL	O	Focusing balance adjustment output.
31	TBAL	O	Tracking balance adjustment output.
32	FE	I	Focusing error signal input (analog input).
33	TE	I	Tracking error signal input (analog input).
34	RFENV	I	RF envelope signal input (analog input).
35	VDET	I	Vibration detection signal input. (H: Detected)
36	OFT	I	Off-track signal input. (H: Off-track)
37	TRCRS	I	Track crossing signal input.
38	/RFDET	I	RF detection signal input. (L: Detected)
39	BDO	I	Drop-out signal input. (H: Drop-out)
40	LDON	O	Laser ON signal output. (H: ON)

## CIRCUIT DESCRIPTION

## IC2: MN662720RB (X32-4010-00)

Pin No.	Symbol	I/O	Function
41	TES	O	Tracking error shunt signal output. (H:Shunt)
42	PLAY	O	Play signal output. (H: Play)
43	WVEL	O	Double-speed status signal output.
44	ARF	I	RF signal input.
45	IREF	I	Reference current input terminal.
46	DRF	I	DSL bias terminal.
47	DSL F	I/O	DSL loop filter terminal.
48	PLL F	I/O	PLL loop filter terminal.
49	VCO F	I/O	VCO loop filter terminal.
50	AVDD2	I	Analog circuit power supply (for DSL, PLL and DA output blocks).
51	AVSS2	I	Analog circuit GND (for DSL, PLL and DA output blocks).
52	EFM	O	EFM signal output.
53	PCK	O	PLL extraction clock output. (fPCK=4.321MHz)
54	PDO	O	Output terminal of phase comparison signal between EFM signal and PCK signal.
55	SUBC	O	Subcode serial output data output.
56	SBCK	I	Subcode serial output clock input.
57	VSS	I	Oscillator circuit GND.
58	X1	I	X'tal oscillator input terminal. f = 16.9344 MHz or 33.8688 MHz.
59	X2	O	X'tal oscillator output terminal. (33.8688 MHz is used for double-speed playback.)
60	VDD	I	Oscillator circuit power supply.
61	BYTCK	O	Byte clock output.
62	/CLDCK	O	Subcode frame clock signal output. (fCLOCK=7.35kHz)
63	FCLK	O	X'tal frame clock output. (fFCLK=7.35kHz)
64	IPFLAG	O	Interpolation flag output. (H: Interpolation)
65	FLAG	O	Flag output.
66	CLVS	O	Spindle servo phase sync status signal output. (H: CLV, L: Coarse servo)
67	CRC	O	Subcode CRC check result output. (H: OK, L: NG)
68	DEMPH	O	De-emphasis detection signal output. (H:ON)
69	RESY	O	When SSEL=H; FLAG6 output (RAM address reset generation signal in case the jitter margin of CLV servo is exceeded. L: Address reset generation.) When SSEL=L; RESY output (frame sync re-sync signal output. H: Sync, L: Out of sync.)
70	NC1	NC	No connection (without internal connection).
71	/TEST	I	Test terminal. (Normally H)
72	AVDD1	I	Digital circuit power supply.
73	NC2	NC	No connection (without internal connection).
74	AVSS1	I	Digital circuit GND.
75	NC3	NC	No connection (without internal connection).
76	RSEL	I	RF signal polarity select terminal. When bright level is "H": RSEL=H. When bright level is "L": RSEL=L.
77	CSEL	I	X'tal oscillation frequency select terminal. X'tal oscillator frequency 33.8688 MHz: CSEL=H. 16.9344 MHz: CSEL=L.
78	PSEL	I	Test terminal. (Normally L)
79	MSEL	I	SMCK terminal output frequency select terminal.(H: SMCK = 8.4672 MHz, L: SMCK = 4.2336 MHz)
80	SSEL	I	SUBQ terminal output mode select terminal. (H: Q code buffer use mode)

# KDC-8020R

## CIRCUIT DESCRIPTION

IC2: MN662720RB (X32-4010-00)

### 8. Automatic adjustment

	Command								Operation Summary	Required Time	Traverse Operation
	B7	B6	B5	B4	B3	B2	B1	B0			
FO offset AOC1	1	1	1	1	1	0	0	1	Moves the focusing lens to the lowest point and obtained the value of focusing error in this condition for using it as the offset value in compensation.	140ms	FWD/ REV possible.
TR offset AOC2	1	1	1	1	1	0	1	0	Offset adjustment by turning LDON terminal "L" (laser OFF). Usable by fixing the TES terminal on the side of the externally-connected head amp to "L".	50ms	FWD/ REV possible.
FO balance ABC1	1	1	1	1	0	1	1	1	Compensation by injecting external disturbance into the focusing servo loop and balancing the ripples of the 3T component envelope of RF signal in the positive and negative sections of FE signal. The compensation output terminal is FBAL.	Below 0.5S	STOP
TR balance ABC2	1	1	1	1	1	0	1	1	Compensation by using the average tracking error value during rotation of spindle in 6T mode as the balance value. The compensation output terminal is TBAL.	Below 1S	STOP
FO coarse gain AGC1	1	1	1	1	1	1	0	0	Performs focusing search at approx. 5.4 Hz and determines the amount of external disturbance injection for fine AGC based on the focusing error S p-p value. The gain itself is not changed.	190ms	FWD/ REV possible.
TR coarse gain AGC2	1	1	1	1	1	1	0	1	Determines the amount of external disturbance injection for the fine AGC based on the tracking error p-p value during rotation of spindle in 6T mode. The gain itself is not changed.	100ms	STOP
FO fine gain FAGC	1	1	1	1	1	1	1	0	By injecting external disturbance in the focusing servo loop, adjusts the gain cross-point to the frequency set in the RAM with a label name of GSET.	Below 0.5S	STOP
TR fine gain TAGC	1	1	1	1	1	1	1	1	By injecting external disturbance in the tracking servo loop, adjusts the gain cross-point to the frequency set in the RAM with a label name of GSET.	Below 0.5S	STOP

## CIRCUIT DESCRIPTION

## IC2: MN662720RB (X32-4010-00)

## Auto focusing search

When the Focusing ON command (TOF or PLY) is input through the  $\mu$ -com-interface, the FOD terminal generates a triangular wave of approx. 1.3Hz, which drives the focusing coil so the focusing servo is locked automatically when the S-shaped waveform of focusing error signal is detected. /FLOCK goes "L" when the focusing servo is locked successfully.

The just-in-focus point of focusing servo is detected based on the error signal input from the FE terminal. Namely, at the moment a value lower by 30LSB from the peak value of the S-shaped signal at the FE terminal is detected, the lens is stopped by fully driving the servo output to the opposite drive direction.

When the inclination of the error signal from the FE signal is inverted from the previous direction, the stoppage of lens drive is identified and the servo loop is turned ON.

Example of focusing search operation

In case focusing servo locking fails due to a certain reason, the locking operation is re-tried automatically. Also, the locking operation is activated automatically in case the /FLOCK terminal goes "H" during playback (with focusing servo ON, tracking servo ON).

# KDC-8020R

## CIRCUIT DESCRIPTION

IC2: MN662720RB (X32-4010-00)

### /FLOCK

The focusing servo lock signal /FLOCK is generated from the RF detection signal input ("L" : Detected) from /RFDET. /FLOCK is "H" when focusing is unlocked and "L" when it is locked.

- ① .....When /RFDET has been "L" for more than 90 to 136 $\mu$ s, /FLOCK goes "L".
- ② .....When /RFDET has been "H" for more than 8.7 to 11.6ms, /FLOCK goes "H".

Focusing servo locking timing

### Disc detection (DDT)

The FOD terminal generates a triangular wave of approx. 5.4Hz and disc detection signal FESL is output at SENSE. SENSE (FESL) is turned "H" when the disc is detected.

- The focusing servo is not locked in this operation.
- The amplitude of the triangular wave is equal to the signal for use in focusing search.
- The disc detection operation is continued until another command is input.

Example of disc detection operation

### Auto tracking servo lock

When the tracking ON command (PLY) is input through the  $\mu$ -com interface, the tracking servo is locked to the nearest track while monitoring tracking error signal TE and off-track signal OFT ("H" : Off the track). In this operation, the loop filter output is basically held and the tracking coil is driven by the kick pulse output from the KICK terminal. When off-track signal OFT has been "L" continuously for approx. 5.8ms, the kick pulse generation is stopped and the circuitry enters the ordinary servo status.

The /TLOCK terminals goes "L" when the tracking servo is locked.

### Tracking servo lock control

- ①, ③ ... Pulse drive in the direction of the target track
- ②, ④ ... Pulse drive in the opposite direction to the target track
- Servo is turned ON when the inclination of TE changes while TP (Track Position)=0 (OFT= "L") (minimum relative velocity).
- For the tracking servo, the P.U. is forced by the pulse drive to move until the on-track position (OFT= "L") of the target track and servo is locked when the relative velocity becomes slow enough.

## CIRCUIT DESCRIPTION

### IC2: MN662720RB (X32-4010-00)

#### /TLOCK

Tracking lock signal TLOCK is generated from the off-track signal input from OFT. /TLOCK is "H" when tracking is unlocked and "L" when it is locked.

- ① .....When /OFT has been "L" for more than 2.9ms, /TLOCK goes "L".
- ② .....When /OFT has been "H" for more than 11.3 to 17.0  $\mu$ s, /TLOCK goes "H".

Tracking servo locking timing

#### Anti-shock processing

The forced braking is applied for the specified period of time after vibration detection signal VDET ("H" : Detected) has returned from "H" to "L". If off-track signal OFT goes "H" in this period, a kick pulse is generated to turn OFT "L" and improve the resistance against shock. If OFT goes "H" again during the forced braking, the forced braking is extended for the specified period from that moment.

- As the traverse is in the STOP status during the forced braking, do not keep the VDET terminal "H". The forced braking period can be set with data setting SET0.
- It is possible to increase the gain for a certain period when vibration detection signal VDET has gone "H". The amount and period of the gain increase can be set with data setting VSET.

Anti-shock processing period

#### Fail-safe

In case the absolute value of the low-frequency component of the loop filter increases abnormally due to a certain reason, the low-frequency component is clipped because there is a fear of run-away of tracking servo.

- The threshold absolute value of the low-frequency component for activating the fail-safe function can be set with the SYS command.
- The fail-safe function is canceled for approx. 280ms after the completion of kick operation.

#### Polarity of KICK

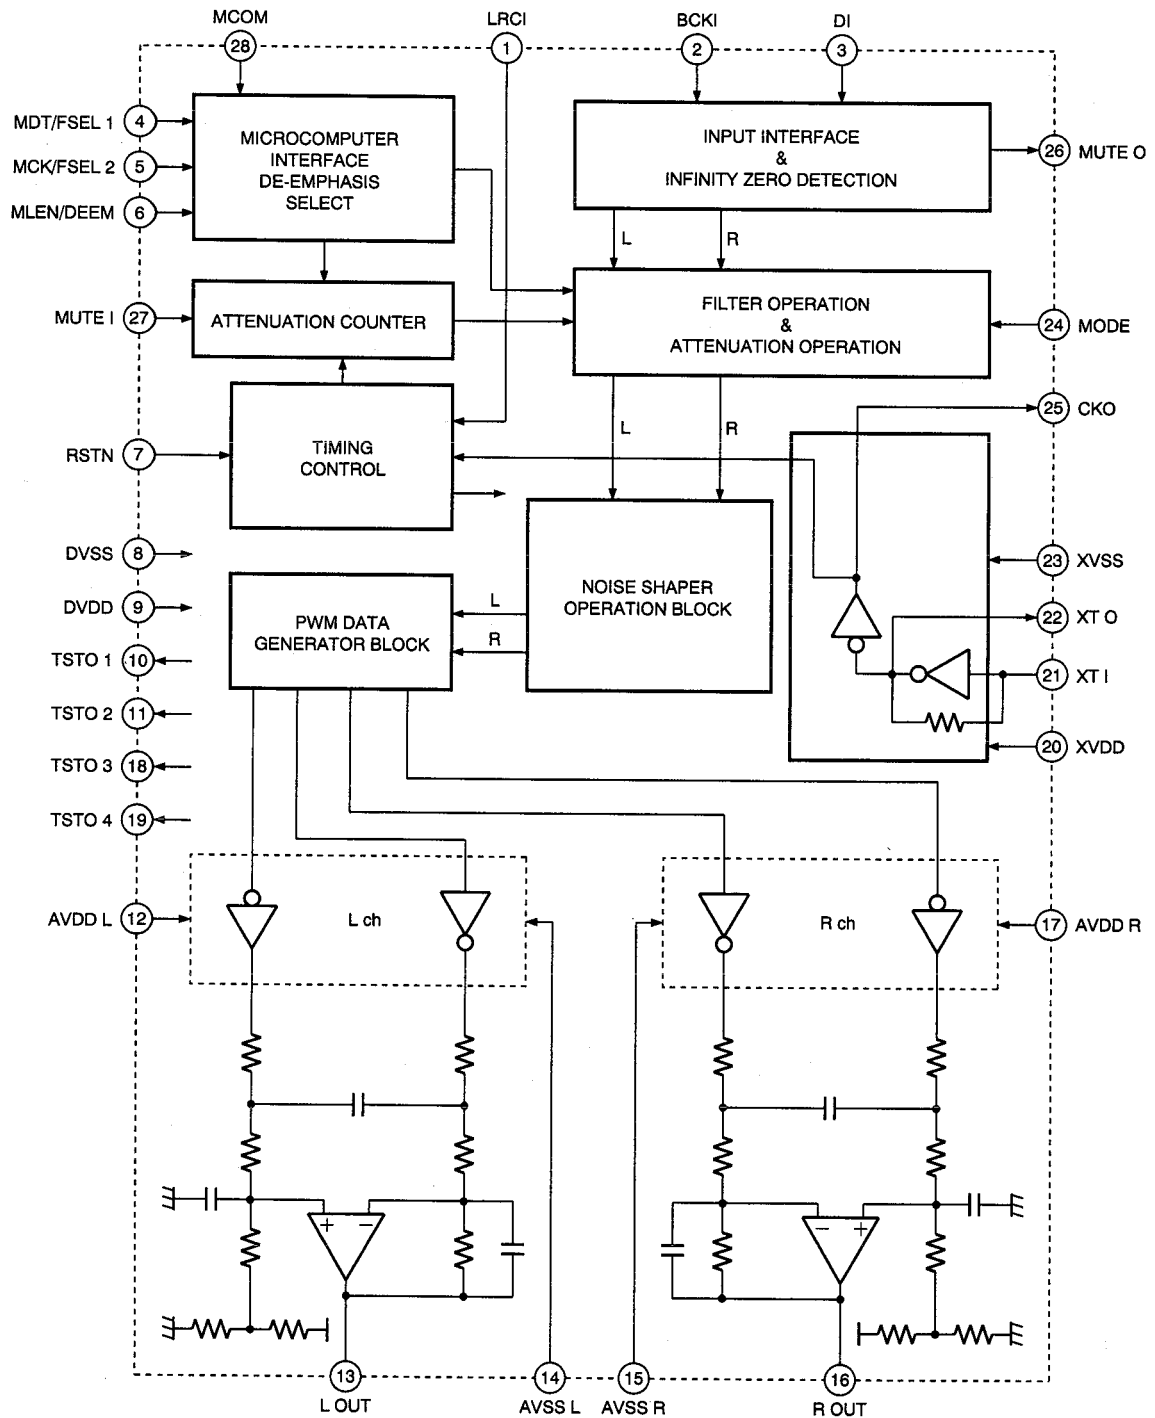

The focusing lens moves toward the inner direction of the disc while KICK is "H".

## CIRCUIT DESCRIPTION

IC6: 78002BGC603-AB8 (X32-4010-00)

Pin	Pin Name	Name	I/O	Function
55	IC2	IC2	-	
56	IC3	IC3	-	
57	P20	Not used	I	• Unused terminal.
58	P21/SO1	Not used	I	• Unused terminal.
59	P22/SCK1	SP/LD	O	• Spindle/loading motor switching. Switches the usage of servo driver between spindle motor drive and loading motor drive. Loading → "H" Spindle → "L"
60	P23/STB	DRVMUTE	O	• Driver muting. Mutes the servo driver while the master clock is stopped in other cases than loading. Muting ON → "L"
61	P24/BUSY	SRQ	O	• Request of communication to mechanism microcomputer. (Mechanism $\mu$ -COM) → (System $\mu$ -COM)
62	P25/SI0/SB0	DATAS	I	• Data from system microcomputer. (System $\mu$ -COM) → (Mechanism $\mu$ -COM)
63	P26/SO0/SB1	DATAM	O	• Data terminal from mechanism microcomputer. (Mechanism $\mu$ -COM) → (System $\mu$ -COM)
64	P27/SCK0	CLK	I	• Clock from system microcomputer. (System $\mu$ -COM) → (Mechanism $\mu$ -COM)

## CIRCUIT DESCRIPTION

IC7: BA6795FP (X32-4010-00) BLT driver

Block diagram

Terminal description

Pin No.	Pin name	I/O	Function
1	OUT1-1	O	CH1 minus output
2	OUT1-2	O	CH1 plus output
3	IN1-1	I	CH1 input
4	IN1-2	I	CH1 input for gain adjustment
5	Vreg-B	O	External Tr connection to base
6	Vreg-Out	O	Regulated voltage output (External Tr connection for collector)
7	MUTE	I	Mute control pin
8	GND	-	Ground
9	CTL	I	Loading/spindle switching pin
10	IN2	I	CH2 input for gain adjustment
11	OUT2-1	O	CH2 plus output
12	OUT2-2	O	CH2 minus output>Loading plus output
13	OUT2-3	O	Loading minus output
14	GND	-	Sub straight ground
15	REV	I	Loading reverse input pin
16	FWD	I	Loading forward input pin
17	OUT3-1	O	CH3 minus output
18	OUT3-2	O	CH3 plus output
19	LDIN	I	Loading input
20	IN3	I	CH3 input for gain adjustment
21	VCC	-	VCC
22	VCC	-	VCC
23	VrefIN	I	Bias AMP input pin
24	IN4-2	I	CH4 input for gain adjustment
25	IN4-1	I	CH4 input
26	OUT4-2	O	CH4 plus output
27	OUT4-1	O	CH4 minus output
28	GND	-	Sub straight GND

Note 1: Plus/minus outputs mean the phase against input.

Note 2: Loading forward/reverse mean the phase against mode.

# KDC-8020R

## MECHANISM DESCRIPTION

## MECHANISM DESCRIPTION

### CD mechanism disassembly procedure

#### Removing the loading roller ass'y

1. Remove the 2 springs (1).
2. Remove the 2 screws (2) then remove the damper (3).
3. Remove the 2 screws (4) then remove the cover by sliding it horizontally (5).
4. Remove the 3 springs (6) then remove the clamp lever (7).
5. Remove the loading roller ass'y (8).

#### Removing the circuit board

1. Melt solder on the 4 positions on the loading motor and spindle motor (9).
  2. Remove the 4 screws (10).
  3. Remove the flexible wire (11) then remove the circuit board.
- ※ When attaching the circuit board, slide the pickup ass'y slightly outward to prevent damage to SW1 (12).

#### Removing the gear ass'y

1. Remove the 2 screws (13) then remove the cam plate.
- ※ When attaching the cam plate, be careful about the position of the hole (14).
2. Remove the screw (15) then remove the push plate.
3. Remove the spring (16).
4. Remove the screw (17) then remove the plate spring (18).
5. Remove the worm gear (19).
6. Remove the 2 screws (20) then remove the gear ass'y.

# KDC-8020R

## MECHANISM DESCRIPTION

### Removing the spindle motor

1. Remove the 2 screws ( 21 ) then remove the loading motor ass'y.
  2. Remove the pickup block by sliding it horizontally ( 22 ).
  3. Remove the 2 screws ( 23 ) then remove the spindle motor.
- ※ When attaching the spindle motor, position it so that the (+) terminal comes on the worm gear side ( 24 ).

### Removing the loading motor and sled motor

1. Remove the 2 screws ( 25 ).
  2. Melt solder on 5 positions ( 26 ) and remove the motor and bracket.
- ※ When attaching the loading motor and sled motor, position them so that the surface on which characters are printed comes on the bracket side ( 27 ).
- ※ When attaching the worm gear on the loading motor or sled motor, attach so that the top of the worm gear projects by 12.5 mm ( 28 ).

## MECHANISM DESCRIPTION

### Mechanism operation description

#### 1. Loading

1. Place a CD (Compact Disc).
2. Photosensors A, B and D detect the insertion of CD.

3. When three photosensors A, B, C and D turn ON, the  $\mu$ -COM outputs instruction to start rotation of the loading motor (2).
4. The rotation is transmitted to the worm gear (21) then to the loading roller (33) (3).
5. The CD is pulled in by the friction of the rubber roller (33).

6. When the CD hits the positioning pin (pins 1, 2), the lever (5) is turned by the CD in the direction of the arrow (4).
7. The lever (5) pushes the trigger arm (8) (5).

# KDC-8020R

## MECHANISM DESCRIPTION

### 2. Chucking

1. When the trigger arm (8) is pressed ( ❶ ), the rack (31) and gear (26) mesh with each other and move the slider (15) by means of the arm (19) ( ❷ ).
2. Interlocked with the slider (15), the mechanism lock mechanism and clamp mechanism are activated.

3. With the mechanism lock mechanism, the movement of the slider (15) in the direction of the arrow ( ❸ ) releases the 4 lock levers (7, 6, 11, 12) ( ❹, ❺, ❻, ❼ ) and the mechanism deck is floated.

4. With the clamp mechanism, the movement of the slider (15) ( ❸ ) moves the clamp holder (58) downwards ( ❾ ) around the fulcrum (A), chucking the CD onto the turntable. The roller holder (17) turns around the fulcrum (B) ( ❿ ) to release the CD.

## MECHANISM DESCRIPTION

5. After the operation above, the projection on the rack (31) pushes the down switch (SW2) ( ❶ ) to stop the loading motor (M3).

### 3. Ejection

1. When the eject button is pressed, the loading motor (M3) rotates in the reverse direction ( ❶ ).
2. The rack (31) moves into the direction of the arrow ( ❷ ), causing the clamp mechanism and mechanism lock mechanism to move in the opposite directions to loading ( ❸ , ❹ , ❺ , ❻ , ❼ ), and the mechanism deck is fixed and the CD is ejected ( ❽ ).

3. The motor (M3) stops at the moment the CD is ejected to outside the position of sensor C.

# KDC-8020R

## MECHANISM DESCRIPTION

## ADJUSTMENT

No.	ITEM	INPUT SETTINGS	OUTPUT SETTINGS	TUNER (RECEIVER)	ALIGNMENT POINTS	ALIGN FOR	FIG.
<b>FM SECTION</b>							
1	DISCRI-MINATOR	(A) 98.1 MHz 0 dev 60 dB $\mu$ (ANT input)	Connect a DC voltmeter to pin 2 of TP1 (TU1, X25-)	FM 98.1 MHz	T301 (TU1 in X25-)	0 V	(a)
2	SOFT MUTE LEVEL	(A) 98.1 MHz 1 kHz, $\pm 40$ kHz dev 60 dB $\mu$ $\rightarrow$ No input	(B)	FM 98.1 MHz	VR303 (TU1 in X25-)	Assuming that the output is 0 dB with an input of 60 dB $\mu$ , adjust so that the output level is -25 dB.	
3	SEPARATION	(C) 98.1 MHz 1 kHz, $\pm 40$ kHz dev Pilot: $\pm 6.0$ kHz dev Selector: L or R 60 dB $\mu$ (ANT input)	(B)	FM 98.1 MHz	VR302 (TU1 in X25-)	Adjust it so that the crosstalk from L to R and R to L become minimum.	
4	ANRC	(C) 98.1 MHz 1 kHz, $\pm 40$ kHz dev Pilot: $\pm 6.0$ kHz dev Selector: L or R 35 dB $\mu$ (ANT input)	(B)	FM 98.1 MHz	VR301 (TU1 in X25-)	Separation 10 dB	
5	SEEK STOP LEVEL	(A) 98.1 MHz 0 dev 20 dB $\mu$ (ANT input)	TEST MODE: ON	FM 98.1 MHz	VR1 (X25-)	Adjust so that the "►" and "■" indicators in the front panel are lit. Only "►" is lit: Too low Only "■" is lit: Too high	
6	MUTE LEVEL	(A) 98.1 MHz 0 dev 5 dB $\mu$ (ANT input)	TEST MODE: ON	FM 98.1 MHz	VR304 (TU1 in X25-)	Adjust so that the "SCN" indicator in the front panel are lit.	
<b>AM SECTION</b>							
[1]	SEEK STOP LEVEL	(D) 999 kHz 0% mod 35 dB $\mu$ (ANT input)	—	AM 999 kHz	VR201 (TU1 in X25-)	STOP	

\*The CD servo unit (X32-) is adjustment-free.  
There is no point to be adjusted.

\*Test mode : Turn power ON while holding the  and  keys depressed. (All of the LCD elements light.)  
Then, press the  key.  
To quit : Power OFF.

# KDC-8020R

## ABGLEICH

Nr.	GEGENSTAND	EINGANGS-EINSTELLUNGEN	AUSGANGSEINSTELLUNGEN	TUNER (RECEIVER)	ABGLEICH-PUNKTE	ABGLEICHEN AUF	ABB.
<b>FM (UKW)-EMPFANGSTEIL</b>							
1	DISCRIMINATOR (DISKRIMINATOR)	(A) 98,1 MHz 0 Hub 60 dB $\mu$ (ANT-Eingang)	Ein Gleichstrom-Voltmeter an Stift 3 von TP1 anschließen. (TU1, X25-)	FM (UKW) 98,1 MHz	T301 (TU1, X25-)	0 V	(a)
2	SOFT MUTE LEVEL (GERÄUSCH-DÄMPFUNGSGEGEL)	(A) 98,1 MHz 1 kHz $\pm$ 40 kHz Hub 60 dB $\mu$ - kein Eingang	(B)	FM (UKW) 98,1 MHz	VR303 (TU1, X25-)	Unter der Annahme, daß der Ausgang 0 dB bei einem Eingang von 60 dB beträgt, so einstellen, daß der Ausgangspegel -25 dB ist.	
3	SEPARATION (TRENNUNG)	(C) 98,1 MHz 1 kHz $\pm$ 40 kHz Hub Pilot: $\pm$ 6,0 kHz Hub Wähler: L oder R 60 dB $\mu$ (ANT-Eingang)	(B)	FM (UKW) 98,1 MHz	VR302 (TU1, X25-)	So einstellen, daß das Übersprechen von L zu R und von R zu L minimal wird.	
4	ANRC	(C) 98,1 MHz 1 kHz $\pm$ 40 kHz Hub Pilot: $\pm$ 6,0 kHz Hub Wähler: L oder R 35 dB $\mu$ (ANT-Eingang)	(B)	FM (UKW) 98,1 MHz	VR301 (TU1, X25-)	Trennung 10 dB

**CAUTION:** For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

DC voltages are as measured with a high impedance voltmeter. Values may vary slightly due to variations between individual instruments or/and units.

## SPECIFICATIONS

Specifications subject to change without notice.

### Disc Section

Laser Diode .....	GaAlAs ( $\lambda=780$ nm)
Digital Filter (D/A) .....	8 Times Over Sampling
D/A Converter .....	1 bit (with D.P.A.C)
Spindle Speed .....	500~200 rpm (CLV)
Wow & Flutter .....	Below Measurable Limit
Frequency Response .....	10 Hz ~ 20 kHz ( $\pm 1$ dB)
Total Harmonic Distortion .....	0.01 % (1 kHz)
Signal to Noise Ratio .....	93 dB
Dynamic Range .....	96 dB
Channel Separation .....	85 dB

### FM tuner section

Frequency Range .....	87.5 MHz ~ 108.0 MHz
Channel Space .....	50 kHz
Usable Sensitivity (DIN) .....	0.9 $\mu$ V/75 $\Omega$
Quieting Sensitivity (S/N = 46 dB) .....	1.6 $\mu$ V/75 $\Omega$
Frequency Response ( $\pm 3$ dB) .....	30 Hz ~ 15 kHz
Signal to Noise Ratio .....	68 dB
Selectivity (DIN) .....	70 dB
19 kHz Carrier Leakage .....	65 dB
Stereo Separation .....	35 dB (1 kHz)

### MW tuner section

Frequency Range .....	531 kHz ~ 1611 kHz
Usable Sensitivity .....	30 $\mu$ V

### LW tuner section

Frequency Range .....	153 kHz ~ 281 kHz
Usable Sensitivity .....	60 $\mu$ V

### Audio section

Maximum Power Output .....	25 W $\times$ 4
Power Output (4 $\Omega$ , 1 kHz, 10% THD) .....	20 W $\times$ 4
(4 $\Omega$ , 1 kHz, 1% THD) .....	15 W $\times$ 4
Tone Action .....	Bass: $\pm 8$ dB (100 Hz)
	Treble: $\pm 8$ dB (10 kHz)
Preout Level .....	1.0 V (10 k $\Omega$ )

### General

Operating Voltage .....	14.4 V (11 ~ 16 V)
Current Consumption .....	5.0 A
Operating Temperature .....	-10 ~ 50 $^{\circ}$ C
Installation Size (W $\times$ H $\times$ D) .....	182 $\times$ 52 $\times$ 163 mm
Weight .....	1.6 kg

### Note:

Component and circuitry are subject to modification to insure best operation under differing local conditions. This manual is based on, the Europe (E) standard, and provides information on regional circuit modification through use of alternate schematic diagrams, and information on regional component variations through use of parts list.

## KENWOOD CORPORATION

14-6, Dogenzaka 1-chome, Shibuya-ku, Tokyo, 150 Japan

### KENWOOD SERVICE CORPORATION

P.O. BOX 22745, 2201 East Dominguez St., Long Beach, CA 90801-5745 U.S.A.

### KENWOOD ELECTRONICS CANADA INC.

6070 Kestrel Road, Mississauga, Ontario, Canada L5T 1S8

### KENWOOD ELECTRONICS LATIN AMERICA S.A.

P.O. BOX 55-2791, Piso 6 Plaza Chase, Cl. 47 y Aquilino de la Guardia, Panama, Republic de Panama

### TRIO-KENWOOD U.K. LIMITED

KENWOOD House, Dwight Road, Watford, Herts, WD1 8EB United Kingdom

### KENWOOD ELECTRONICS BENELUX N.V.

Mechelsesteenweg 418 B-1930 Zaventem, Belgium

### KENWOOD ELECTRONICS DEUTSCHLAND GMBH

Rembrücker Str. 15, 63150 Heusenstamm, Germany

### TRIO-KENWOOD FRANCE S.A.

13 Boulevard Ney, 75018 Paris, France

### KENWOOD ELECTRONICS ITALIA S.p.A.

Via G. Sirtori, 7/9 20129 Milano, Italy

### KENWOOD ESPAÑA S.A.

Bolivia, 239-08020 Barcelona, Spain

### KENWOOD ELECTRONICS AUSTRALIA PTY. LTD. (A.C.N. 001 499 074)

P.O. BOX 504, 8 Figtree Drive, Australia Centre, Homebush, N.S.W. 2140, Australia

### KENWOOD & LEE ELECTRONICS, LTD.

Unit 3712-3724, Level 37 Tower 1, Metroplaza, 223 Hing Fong Road, Kwai Fong N.T. Hong Kong

### KENWOOD ELECTRONICS SINGAPORE PTE LTD.

No. 1 Genting Lane # 07-00, KENWOOD Building, Singapore, 1334

### KENWOOD ELECTRONICS (MALAYSIA) SDN BHD

10 th Floor, Block B, Wisma Semantan, No. 12, Jalan Gelenggang, Bukit Damansara, 50490 Kuala Lumpur, Malaysia
